AUDITS¹

*In the past I have found it quite difficult to manage a list of active ionograms. Sometimes the server is down, they come and go and are sometimes moved to another location. Therefore, from time to time I will perform an audit and place the latest date of an active ionogram in brackets next to the station. The most recent audit occurred on **14 Apr 2017**. Stations with no date shown have not yet been audited. Stations that have not been active for the past six months will be removed from this list and show an audit date in bold red if they have not reported in the past 3 months.*
